Re: WT Docket 11-65

Dear Chairman Genachowski,

Technology is forever changing the way we provide and manage our healthcare. Coordination of all our healthcare needs has never been easier and that's critically important to ensuring the physical well being of those in need. Improving the quality and accessibility of medical services along the Lower Colorado River region is a primary focus of our organization and modern technology allows us to better serve our patients. Keeping pace with the trend, we are working with our partner hospitals and clinics throughout the region and converting all of our patient records to best serve the health of our patients in the most efficient way.

To that end, it is of vital importance that there be access to high-speed internet connections in the areas we serve. As you may be aware, rural America is facing a shortage of physicians when compared to more metropolitan areas so to meet the community needs we operate a mobile unit that provides quality medical care in our largely rural footprint. It is important that our medical professionals in the field be able to connect to the internet to access patient health records and prescription information in real time.

The merger of AT&T and T-Mobile would provide additional high-speed internet access to much of the territory I referenced, we are a part of the over 97% of the American population that will see 4G network in our communities, and it can't arrive soon enough. The transaction would facilitate telemedicine accessibility to many more residents in need of medical care who would not have access to healthcare services otherwise.

I strongly encourage you to approve AT&T/T-Mobile merger. Expanded healthcare accessibility is dependent on access to modern technology and your vote in favor of this acquisition would help ensure our ability to more quickly provide quality healthcare to our communities.

Sincerely,  
Amanda Aguirre  
President/CEO
